

## **UCRinterest (web-based)**

### **MILESTONE1 : GROUP 3**

This project mimics the Pinterest website. Users can “pin” their interested pictures with descriptions on a board, look at other users’ pins, re-pin and comment on other pins.

#### **Milestone 1:**

1. Each user should be able to post pins (picture and description) on and manage the pin board. They can upload, delete, describe, label and sort their pins.
2. Users should be able to add other user as friends and get noticed when a friend has updates.
3. Users can re pin, like, comment on and save pins to their “favorites”.
4. Users can set whether specific pins can be browsed and commented only by friends or all the others.
5. “Look around” is optimized based on user preference, interests, and browse history.
6. Users can search pins based on pins label or description by entering keyword.
