UCRinterest (web-based)

GROUP 3

This project mimics the Pinterest website. Users can "pin" their interested pictures with descriptions on a board, look at other users' pins, re-pin and comment on other pins.

Milestone 0:

1. Users should be able to sign up and log in.
2. Each user should have a profile, including personal information (photo, nickname, gender, profile creation date, birthday, etc.) and topics of interest.
3. Each user should be able to post pins (picture and description) on and manage the pin board. They can upload, delete, describe, label and sort their pins.
4. The browsing page should be similar to the Pinterest website. Users can browse pins in a page showing the thumbnails and descriptions of the photos. When a pin is clicked, one can see a bigger image and more detailed information of the pin.
5. Users can "look around" randomly selected pins
